

The following steps will help you to increase search result accuracy.

1. If the results are unsatisfactory, reduce the number of words (e.g., "**bicycle framework**" instead of "**carbon bicycle frame work**").

2. Avoid keywords which are too specific or specialized (e.g., "**4X4 Honda ATV**")
3. Only search one product at a time.
4. Don't include a country/region's name in your search (e.g., "**shoe Malaysia**").
5. Don't include the word "**buyer**" or "**seller**" in your keyword phrase (e.g., "**shoe buyer**").
